

# Sol Brokerage

**An SREC solution that lets you benefit from the risk-reward of the spot market with no effort required. You will get the advantage of our expertise and the full value of your SRECs.**

## Why Sol Brokerage:

Thanks to strong solar legislation that requires energy suppliers to procure a portion of their energy from solar, some states are currently experiencing high demand for SRECs that leads to high spot market prices. However, energy suppliers are not typically willing to engage directly with small system owners, so most system owners have little price leverage. Sol Brokerage provides you with the ability to leverage the collective bargaining power of a large pool of customers and our expertise so you can effortlessly achieve the highest SREC prices.

## Features:

- **Aggressive Target Price:** We set an aggressive target price each quarter based on our knowledge of market conditions. Our interests are aligned with customers to achieve the highest SREC prices.
- **Flexible Contract:** Sol Brokerage has a 1 year commitment, but customers may opt to convert into a Sol Systems fixed rate contract at any time, if available.
- **No Effort Required:** Sol Brokerage customers will receive a quarterly payment without having to worry about setting competitive floor prices or selling SRECs each month.

## How it Works:

### Sign up

Sign up for our brokerage services and we will register your system, establish a target and floor price for your SRECs using our market knowledge and expertise, and sell your SRECs at the highest prices. We will only enter into SREC purchase agreements that clear our aggressive hurdles and help us achieve the highest SREC prices for our customers.

### Receive Payments

Each quarter, you will receive a payment for each SREC produced by your system. This payment will reflect the weighted average of our SREC sales for that quarter less a 5% brokerage fee.

Figures are for illustrative purposes only.
